

EARNBRIDGE

CAREERS

Business Overview and Competitive Website Strategy

A practical blueprint for building trust, attracting qualified candidates, winning employers and creating a scalable remote-work platform.

Core positioning

EarnBridge Careers prepares people for work, connects them with trusted opportunities and supports their continued growth - while helping employers access assessed, dependable and professionally supported talent.

Prepared August 2026

Strategic business document and website developer brief

OVERVIEW

Document Roadmap

01	Business overview	Purpose, problem, operating model, customers and revenue opportunities.
02	Competitive landscape	How Jobberman, Andela, Turing, Generation, Upwork and Decagon relate to the model.
03	Market positioning	The distinct promise and defensible strengths EarnBridge should own.
04	Website strategy	Trust-first architecture, two-sided conversion paths and homepage blueprint.
05	Page specifications	What every major page must contain and the action it must produce.
06	Design system	Brand colours, typography, components, photography and mobile behaviour.
07	Technology and growth	Wix Studio, CMS, forms, automations, SEO, performance, security and analytics.
08	Developer execution plan	Phases, quality gates, launch checklist and measurable outcomes.
Important expectation No website can honestly guarantee that every visitor will register or that it will automatically defeat larger competitors. The correct objective is to outperform typical alternatives in clarity, trust, speed, usefulness and conversion - then improve continuously through real user data and testing.		

01

Business Overview

What EarnBridge Careers is, who it serves and how it creates value.

Company Overview

EarnBridge Careers is a career-development, recruitment and remote-work support company created to connect skilled and aspiring professionals with legitimate digital-work opportunities. It also helps employers find, assess, onboard and support dependable remote talent.

Unlike a conventional job board that mainly publishes vacancies, EarnBridge is designed to guide users through the complete journey: discovery, readiness assessment, training, profile preparation, opportunity matching, onboarding and continued performance support.

The business in one sentence

EarnBridge Careers is a supported pathway from career preparation to real work, combined with a talent-sourcing and workforce-support service for employers.

The Problem EarnBridge Solves

Untrusted opportunities Candidates struggle to separate genuine remote jobs from scams, vague advertisements and misleading promises.	Readiness gaps Many capable people lack strong CVs, professional profiles, communication habits or practical remote-work discipline.
No guided pathway Job boards often leave candidates to search, compete and recover from rejection without personalised support.	Employer risk Businesses lose time reviewing unsuitable applications and worry about reliability, skill level and remote accountability.
Experience barrier New workers are frequently rejected for lacking experience but cannot gain experience without their first opportunity.	Weak post-placement support Most services end after an introduction, even when workers and employers still need onboarding and performance help.

The EarnBridge Solution

- 1 Attract candidates and employers through trusted content, partnerships, social media and search.
- 2 Register candidates through a clear application that collects skills, interests, availability and equipment readiness.
- 3 Assess communication, digital literacy, reliability, role-specific ability and remote-work readiness.
- 4 Provide practical preparation, career guidance, profile improvement and targeted training.
- 5 Match qualified candidates to suitable jobs, internships, freelance assignments or managed projects.
- 6 Support onboarding, expectations, communication and performance after placement.
- 7 Use verified outcomes and employer feedback to improve matching and build public trust.

BUSINESS MODEL

Services

Candidate recruitment and assessment Registration, screening, interviews, work-readiness checks and role-specific testing.	Remote-work readiness training Communication, time management, reporting, productivity tools, confidentiality and professional conduct.
Career-development support CVs, LinkedIn and professional profiles, portfolio guidance, applications, interviews and career planning.	Opportunity matching and placement Matching qualified people with suitable employment, contract, freelance, internship or project opportunities.
Employer recruitment services Sourcing, assessing, shortlisting and presenting candidates based on a clear employer brief.	Managed workforce support Onboarding, attendance or task tracking, quality checks, reporting and issue resolution for assigned teams.
Corporate and partner training Custom programmes that prepare candidates or existing employees for specific roles and standards.	Career knowledge and community Practical guides, workshops, events, peer support and verified opportunity alerts.

Primary Customers

Job seekers Graduates, unemployed or underemployed people, remote-work beginners, freelancers and professionals seeking better opportunities.	Employers Startups, small and medium-sized businesses, international teams, agencies and companies outsourcing digital functions.
Institutional partners Training organisations, schools, NGOs, government programmes, communities and workforce-development partners.	Project clients Companies that need a managed group for customer support, administration, social media, data, AI support, research or sales.

Potential Revenue Streams

- Employer-paid recruitment, shortlisting and placement fees.
- Monthly workforce-management or managed-service fees.
- Employer subscriptions for repeated hiring, talent access or priority support.
- Candidate training, premium career support and professional-document services.
- Corporate training and workforce-readiness programmes.
- Project margins on legitimate outsourced work delivered by managed teams.
- Partnership income, sponsorships and institutional programme contracts.

Transparency rule

Every fee, deduction, refund condition, employment term and placement condition should be disclosed before a candidate pays, trains or accepts work. Avoid unconditional claims of guaranteed employment unless contracted opportunities already exist and the promise can be fulfilled lawfully.

02

Competitive Landscape

Established businesses prove that separate parts of the EarnBridge model are commercially viable.

Companies with Related Models

EarnBridge is not an exact copy of any single company. Its opportunity is to combine functions that established businesses often separate: job discovery, talent assessment, training, employer recruitment, placement and post-placement support.

Company	Core model	What EarnBridge can learn	EarnBridge opportunity
Jobberman	Career platform, verified employers, job alerts, assessments, CV support and recruitment services. [1]	Strong local trust signals, visible employer verification and clear separation of job-seeker and employer services.	Offer more guided onboarding, readiness support, placement follow-up and transparent anti-scam protection.
Andela	Global talent marketplace that supports sourcing, qualification, hiring, management and payment, with a strong technology and AI focus. [2]	End-to-end employer experience and confidence in candidate quality.	Serve a wider range of digital and entry-level roles while keeping the human support layer.
Turing	Remote talent network and opportunities across technology, AI and specialist fields. [3]	Role matching, talent profiles and strong remote-work positioning.	Create a simpler entry path for developing talent and nontechnical professionals.
Generation	Education-to-employment model built around preparing, placing and supporting people in careers. [4]	Training tied directly to employer demand and post-programme support.	Apply the prepare-place-support model specifically to remote and digital work.
Upwork	Global human and AI-powered work marketplace connecting businesses with independent professionals. [5]	Easy discovery, visible profiles, clear categories and transactional convenience.	Reduce competition anxiety through assessment, personalised matching and managed placements.
Decagon	Technology training, mentorship and job-placement support for software and digital careers. [6]	Outcome-focused training, proof of alumni progress and employer relationships.	Expand beyond software into customer support, operations, sales, creative, data and AI-support roles.

What the Comparison Means

Do not compete on size Larger platforms already have enormous databases. EarnBridge should compete on support, trust, local understanding and candidate quality.	Do not become a generic job board A list of jobs is easy to copy. The defensible value is the preparation, verification, matching and ongoing human support around the listing.
Show real outcomes Specific, verified case studies are more persuasive than broad claims. Each result should state the role, process, date and measurable outcome.	Serve both sides clearly The website must immediately help a job seeker find the right next step and help an employer begin hiring without confusion.

Competitive White Space

The position EarnBridge should own

A trusted, human-supported remote-career bridge for emerging talent and growing employers - combining readiness, verified opportunity access, placement and workforce support in one clear service.

03

Market Positioning

How EarnBridge should be understood, remembered and trusted.

Brand Promise

EarnBridge should never sound like a quick-money website. It should sound like a responsible career and recruitment institution. The brand promise must focus on preparation, genuine opportunity access, transparent expectations and measurable growth.

Recommended positioning statement

EarnBridge Careers prepares people for work, connects them with trusted opportunities and supports them as they build successful remote careers - while helping businesses access assessed, dependable and professionally supported talent.

Vision and Mission

Vision

To become a trusted international bridge between talented people and meaningful digital-work opportunities.

Mission

To reduce unemployment and underemployment by preparing individuals for modern work, connecting them with legitimate opportunities and providing the support they need to succeed.

Distinctive Strengths

Human guidance

Real support before and after application instead of leaving candidates alone.

Readiness before placement

Candidates are assessed and prepared, protecting both their confidence and the employer experience.

Verified opportunity process

Clear employer identity checks, safety warnings and visible verification status.

Broad role coverage

Technical and nontechnical remote roles, including support, operations, creative, sales, data and AI-assisted work.

Managed talent option

Employers can hire an individual or ask EarnBridge to coordinate a complete team.

Outcome accountability

Placement retention, employer satisfaction and candidate progression are measured rather than hidden.

Suggested Taglines

Your Bridge to Real Remote Work.

Prepared Talent. Trusted Opportunities.

From Career Readiness to Real Work.

Connecting Potential with Opportunity.

04

Website Strategy

A trust-first digital experience that turns visitors into qualified candidates, employer leads and long-term users.

The Website Must Win in the First Five Seconds

A first-time visitor should immediately understand what EarnBridge does, who it helps, why it is credible and what action to take. The homepage must not begin with a vague slogan, a large decorative image or an overwhelming menu.

Clear identity State that EarnBridge prepares and connects talent while helping employers hire.	Two obvious paths Use two primary calls to action: Find Work and Hire Talent.
Immediate proof Show verified outcomes, employer or partner logos, testimonials and safety commitments near the top.	Low-risk first step Let visitors explore opportunities or describe a hiring need before demanding a long registration.
Mobile confidence Design for the phone first because many target candidates will arrive through social media and messaging links.	Honest language Replace exaggerated income or guarantee claims with specific processes, requirements and evidence.

Strategic Design Principles

Trust before persuasion Verification, real contact information, policies, team identity and transparent process must appear before aggressive sales language.	One purpose per section Each section should answer one question and lead to one next action.	Progressive disclosure Show simple choices first; reveal detailed requirements only after the visitor selects a path.
Proof near the claim Place testimonials, statistics or evidence beside the statement they support.	Fast over flashy Lightweight motion and clean layouts should replace heavy videos, sliders and effects that delay loading.	Useful even before signup Visitors should gain value from role guides, readiness checks, salary context and application tips.

Practical meaning of "beat other sites"

EarnBridge should be easier to understand than a large marketplace, more supportive than a job board, broader than a specialist bootcamp and more trustworthy than an informal opportunity page. That advantage is created through focus and execution, not visual decoration alone.

CONVERSION ARCHITECTURE

Homepage Blueprint

1. TRUST BAR

Verified opportunities | Human support | Clear process | No hidden promises

2. HERO

Headline + short explanation + two strong buttons: Find Work / Hire Talent

3. PROOF

Real numbers, partner logos, testimonials and transparent placement evidence

4. HOW IT WORKS

Separate 4-step paths for job seekers and employers

5. LIVE OPPORTUNITIES

Searchable role cards connected to Wix CMS dynamic job pages

6. SERVICES

Career readiness, assessment, placement, recruitment and managed workforce

7. SUCCESS STORIES

Detailed case studies with role, journey, result and verification date

8. EMPLOYER CTA

Describe the role or workforce need and receive a response quickly

9. KNOWLEDGE HUB

Career guides, remote-work lessons and employer resources

10. FINAL CTA + FOOTER

Apply, hire, contact, policies, safety centre and social proof

Recommended Hero Copy

Build the Skills. Find the Opportunity. Grow Your Career.

EarnBridge Careers prepares people for legitimate remote work and helps businesses hire assessed, dependable talent.

[\[Find Work \]](#) [\[Hire Talent \]](#)

Homepage Conversion Rules

- Keep the primary navigation to approximately six main choices; place secondary links in the footer or account menu.
- Use a sticky mobile action bar with Find Work and Hire Talent.
- Do not use an automatic carousel. Keep one strong hero message and one supporting visual.
- Place a short trust strip directly beneath the hero: Verified Opportunities, Assessed Talent, Human Support, Transparent Process.
- Show no more than six featured opportunities on the homepage and link to the full searchable directory.
- Use testimonials with a real name, role, photograph or verified identifier and a date.
- End every major section with one relevant action, not several competing buttons.

05

User Journeys and Page Specifications

Every page must answer the visitor's question and move them to one meaningful next step.

Job-Seeker Journey

- 1 Discover: Visitor arrives through search, social media, referral or an opportunity link.
- 2 Understand: Homepage explains the service, requirements, process and safety commitments.
- 3 Explore: Visitor browses verified opportunities, training paths or a readiness assessment.
- 4 Qualify: A short pre-screen shows eligibility before the full application.
- 5 Apply: A multi-step form saves progress and explains why each item is requested.
- 6 Prepare: Candidate receives a checklist, assessment, training or profile-improvement steps.
- 7 Match: Qualified profile is considered for suitable opportunities with clear status updates.
- 8 Grow: Candidate receives onboarding, support and a pathway to stronger roles.

Employer Journey

- 1 Recognise the solution: Employer sees the roles EarnBridge can fill and how candidate quality is controlled.
- 2 Build confidence: Case studies, process, service levels and verification practices reduce perceived risk.
- 3 Describe the need: A short brief collects role, skills, start date, budget range, location and engagement type.
- 4 Speak to EarnBridge: A scheduled call or rapid response clarifies requirements.
- 5 Receive a shortlist: Employer reviews assessed candidates with standardised profile information.
- 6 Hire or launch a managed team: Contracts, onboarding, communication and performance expectations are confirmed.
- 7 Repeat: A good experience creates retained recruitment or managed-workforce business.

INFORMATION ARCHITECTURE

Recommended Sitemap

Core	Job Seekers	Employers	Trust	Growth
Home About How It Works Contact	Find Opportunities Career Assessment Training Application Form Candidate Dashboard	Hire Talent Recruitment Services Managed Teams Employer Request Form Employer Dashboard	Success Stories Verified Employers Safety Centre Pricing & Terms Privacy / Terms	Career Hub Employer Insights FAQs Newsletter Partner With Us

Page-by-Page Requirements

Home Explain the business, split the two audiences, show proof, feature opportunities and produce applications or employer leads.	Find Opportunities Search and filter by role, category, experience, work type, location eligibility and date posted.
Job Detail Show employer verification, responsibilities, requirements, compensation clarity, application deadline, safety warning and apply action.	Career Assessment A short diagnostic that recommends next steps without pretending to guarantee placement.
Training Show role outcomes, curriculum, duration, entry requirements, price, refund terms, instructor identity and relationship to placement.	Hire Talent Explain available roles, assessment process, speed, service options, case studies and employer request form.
Managed Teams Show how EarnBridge can coordinate a complete support, data, sales, social-media or operations team.	Success Stories Publish evidence-rich case studies, not anonymous praise. Include starting point, action, result and verification date.
Safety Centre Explain how opportunities are verified, how scams are reported, payment rules and what EarnBridge will never request.	About and Team Show legal identity, mission, leadership, staff roles, address or service location, contact routes and company story.
Knowledge Hub Career guides and employer resources organised by topic with strong internal linking.	Contact Offer specific routes for job seekers, employers, partners, support and safety reports.

06

Visual Design System

A professional identity that feels credible, modern, accessible and human.

Recommended Visual Direction

The site should use a clean white background, strong dark-blue typography, teal actions and limited gold accents. The visual message is stability plus opportunity: serious enough for employers, encouraging enough for job seekers.

Deep Navy #0E1B36	Bridge Teal #0D9488	Opportunity Gold #F4B942	Soft Background #F4F7FB	Text Grey #5E6B7A
-----------------------------	-------------------------------	------------------------------------	-----------------------------------	-----------------------------

Typography and Layout

Headings Use a clear modern sans-serif in strong weights. Headlines should be confident but not oversized.	Body text Minimum comfortable mobile size, generous line spacing and short paragraphs. Avoid dense walls of text.	Spacing Use a consistent 8-point spacing system so sections, cards and forms feel orderly.
Grid Desktop: 12-column grid. Tablet and mobile: fluid stacks with clear breakpoints and no fixed-width content.	Buttons One primary teal button, one secondary outlined button and quiet text links. Keep labels action-specific.	Forms Single-column forms, visible labels, helpful examples, progress indicators and clear error messages.

Photography and Illustration

- Use real people in believable remote-work settings, not staged luxury or "instant wealth" imagery.
- Show a diverse mix of candidates and employers while avoiding generic stock-photo repetition.
- Prioritise faces, work environments, collaboration and learning moments.
- Compress images and provide descriptive alternative text.
- Use custom diagrams to explain the EarnBridge process instead of decorative artwork that adds no meaning.

Interaction and Motion

Use restrained hover states, subtle card elevation and brief entrance effects only where they clarify hierarchy. Avoid long page transitions, background video, excessive counters and animation that competes with the application process.

07

Trust, Conversion and Safety

The website must prove legitimacy before asking for personal information, money or commitment.

Trust Architecture

Legal identity Display registered company name, registration details when available, support contacts and policy links.	Real team Show leadership and staff with role descriptions and verified professional links where appropriate.
Verified employers Use a visible verification label and explain exactly what has been checked.	Transparent opportunity cards Publish work type, location eligibility, requirements, compensation status, deadline and last verified date.
Safety centre Explain common job scams, official communication channels and how to report suspicious activity.	Outcome evidence Use case studies with permission, dates, role details and measurable progress.
Clear fees Publish whether candidates pay, when payment applies, refund conditions and what is included.	Privacy control Collect only necessary data, explain its use and secure sensitive information.

Conversion System

Micro-conversions Save a job, subscribe to verified alerts, complete a readiness check or download a checklist before full application.	Multi-step applications Break long forms into logical steps and show progress. Ask qualifying questions early.
Smart follow-up Send immediate confirmation, next steps and expected response windows after submission.	Segmented nurturing Different email sequences for new candidates, assessment-ready candidates, employers and partners.
Exit recovery Offer saved progress or a lighter email-alert option instead of an aggressive popup.	Retargeting with consent Use audiences responsibly to remind interested visitors about suitable opportunities or employer services.

Recommended Application Form Structure

- 1 Basic identity and contact information.
- 2 Preferred role categories and career objective.
- 3 Experience, skills, portfolio and language ability.
- 4 Work availability, location eligibility, device and internet readiness.
- 5 Role-specific screening questions.
- 6 Consent, privacy acknowledgement and confirmation of truthful information.
- 7 Confirmation page with next steps, reference number and support contact.

Critical anti-scam standard

The website should clearly state the official email domain, authorised payment channels, prohibited requests and reporting procedure. No recruiter should ask candidates to send passwords, one-time codes, banking login details or unofficial "processing" payments.

08

Wix Development Architecture

How the developer should build a scalable, responsive and manageable website on Wix.

Use Wix Studio, Not a Basic Template Build

Because the site must serve two audiences and grow into dynamic job listings, candidate resources and employer services, the developer should use Wix Studio where possible. Wix Studio supports responsive behaviours, custom breakpoints, grid or flex layouts, CMS content and advanced design control. [13]

Recommended Wix Components

CMS collections Store jobs, employers, success stories, training programmes, articles, FAQs and team profiles as structured content.	Dynamic pages Design one high-quality job-detail template and automatically generate a unique page for each CMS item. [14]
Wix Forms Build candidate, employer, partner and safety-report forms with clear routing and data minimisation.	Automations Send confirmation, next steps, team notifications and follow-up tasks after form submissions. [15]
Member roles Create controlled candidate or employer areas only when the workflow genuinely requires accounts.	Velo backend logic Use code for advanced filtering, application tracking, permissions, integrations and secure server-side operations.
CRM pipeline Track employer leads, candidate stages, follow-up dates and communication status.	Analytics events Record search, filter, form-start, form-completion, job-save, employer-lead and contact actions.

Suggested CMS Collections

Jobs Title, category, employer, verification status, location, eligibility, type, requirements, compensation, deadline, status, last verified.	Employers Name, logo, sector, website, verification level, description, approved jobs, contact owner and review date.
Candidates Private profile data, stage, skills, assessment results, availability, permissions and matching notes.	Applications Candidate ID, job ID, status, date, assessment, notes, communication history and outcome.
Success Stories Person or company, starting point, service used, outcome, quote, evidence, permission and verification date.	Training Programme, outcome, curriculum, duration, requirements, price, instructor, schedule and status.
Resources Title, category, audience, summary, author, date, article body, related jobs and SEO fields.	Safety Reports Reporter details, issue type, evidence, related job or employer, status and resolution - with restricted access.

Security inside Wix

Sensitive candidate information must not be publicly readable from CMS collections. Wix recommends restrictive collection permissions for personal information and secrets, with secure backend operations where needed. [16]

09

Performance, Search and Accessibility

Technical quality is part of trust and directly affects whether visitors complete applications.

Performance Standards

The website should be tested using real mobile devices and Google performance tools. Google identifies three Core Web Vitals for user experience: Largest Contentful Paint of 2.5 seconds or less, Interaction to Next Paint of 200 milliseconds or less and Cumulative Layout Shift of 0.1 or less at the recommended threshold. [8]

Fast first screen Compress the hero image, avoid background video, reduce third-party scripts and prioritise the first meaningful content.	Stable layout Reserve image and component dimensions so buttons and text do not jump while the page loads.
Responsive interaction Keep scripts light, simplify filters and avoid heavy animations during form completion.	Mobile testing Test narrow screens, slow connections, Android devices, keyboard behaviour and form autofill.
Error monitoring Track broken links, failed forms, JavaScript errors and empty search results.	Performance budget Set limits for image size, page weight, third-party tools and animation before development begins.

Search Engine Strategy

- Create one indexable page for every active job with accurate JobPosting structured data. Google states that this markup can make job pages eligible for its special job-search experience. [9]
- Add Organization structured data on the homepage to help search engines understand the company identity and logo. [12]
- Give each service, role category and major audience need a clear, useful page rather than stuffing keywords into one homepage.
- Use people-first articles that answer real candidate and employer questions; Google recommends content created primarily to help users. [10]
- Build descriptive titles, headings, internal links, canonical URLs, XML sitemaps and clean dynamic-page slugs.
- Remove expired job pages correctly or mark them closed; never leave misleading application buttons active.

Accessibility

Build toward WCAG 2.2 Level AA. W3C recommends using the latest WCAG version, which covers accessible content, navigation, forms, target sizes, consistent help and authentication. [7]

- Keyboard-accessible menus, filters, dialogs and forms.
- Visible focus indicators and sufficient colour contrast.
- Proper heading order, landmarks, labels and error identification.
- Alternative text for meaningful images and captions for important video.
- Large touch targets and no information communicated by colour alone.
- Plain-language instructions and no timed form expiration without warning.

Security and Privacy

Development and review should follow the OWASP Top 10 awareness standard for common web-application risks, including access control and security misconfiguration. [11] The site should also use least-privilege permissions, secure administrative accounts, multifactor authentication, spam protection, backups and documented incident response.

10

Content and Growth Engine

The website must become a trusted destination, not a static brochure.

Content Pillars

Opportunity intelligence Verified job openings, role breakdowns, eligibility guidance and application deadlines.	Remote readiness Communication, productivity, equipment, security, interviews and professional behaviour.	Career pathways What different roles involve, skills required, beginner routes and progression opportunities.
Employer resources Hiring guides, remote onboarding, team management, talent assessment and outsourcing advice.	Success evidence Candidate journeys, employer results, programme outcomes and lessons learned.	Safety education Scam warnings, verification updates, privacy guidance and reporting procedures.

Content Quality Rules

- Every article must name an author or reviewer and show a publication or update date.
- Claims about salary, hiring outcomes or job availability must state the source and date.
- Job pages must show the last verification date and application status.
- Avoid mass-produced articles that repeat generic advice without original value.
- Link training content to relevant opportunities and job pages to readiness resources.
- Update or remove stale content on a scheduled editorial cycle.

Social-to-Website Conversion

Social media should create interest, but the website should hold the authoritative information and capture the relationship. Every social post should send users to a relevant landing page - not always the homepage.

Opportunity post Link directly to the verified job-detail page.	Career tip Link to the complete guide and related readiness check.	Success story Link to a full case study with evidence and next steps.
Employer campaign Link to a role-specific talent or managed-team landing page.	Training campaign Link to a transparent programme page with outcome, terms and application.	Safety alert Link to the Safety Centre and reporting form.

11

Analytics and Continuous Improvement

The site should be managed as a measurable business system, not a one-time design project.

Key Performance Indicators

Business goal	Primary metric	Supporting metrics	Review frequency
Build trust	Qualified application completion rate	Safety-centre visits, employer verification views, testimonial engagement	Weekly
Acquire job seekers	Cost per qualified candidate	Organic traffic, form starts, form completion, returning visitors	Weekly / monthly
Acquire employers	Qualified employer leads	Hire-talent form completion, booked calls, proposal acceptance	Weekly
Improve matching	Interview-to-placement rate	Assessment completion, shortlisting rate, time to match	Monthly
Improve outcomes	90-day placement retention	Employer satisfaction, candidate satisfaction, repeat hiring	Monthly / quarterly
Improve website quality	Core Web Vitals pass rate	Mobile conversion, errors, uptime, accessibility issues	Monthly

Testing Programme

- Monthly usability review with at least one job seeker and one employer representative.
- A/B tests on the hero message, CTA labels, form length and proof placement - one controlled change at a time.
- Heatmaps and session recordings only with appropriate privacy controls and masking of sensitive form data.
- Quarterly content audit for expired jobs, broken links, outdated claims and weak pages.
- Monthly mobile performance and accessibility scans after every major update.
- Post-placement surveys to improve the website promise, assessment and employer matching process.

The most important metric

Do not optimise only for registrations. The primary success measure should be qualified outcomes: suitable candidates, genuine employer leads, successful interviews, placements, retention and repeat hiring.

12

Developer Execution Plan

A controlled build process with clear deliverables and quality gates.

Phase 1 - Discovery and Evidence

- Confirm the exact business model, services, candidate fees, employer fees and opportunity-verification policy.
- Collect legal details, team profiles, contact channels, policies, testimonials and real success evidence.
- Define the first role categories and employer service packages.
- Create user profiles for a job seeker, an employer and a partner organisation.
- Agree the primary conversion goals and analytics events.

Phase 2 - Structure and Prototype

- Create the sitemap, user flows and low-fidelity wireframes before visual design.
- Prototype the homepage, job directory, job detail, Hire Talent page and both forms.
- Test the prototype with representative users and fix confusion before full development.
- Approve the content hierarchy and final CTA labels.

Phase 3 - Design System

- Build global typography, colours, spacing, buttons, cards, form fields, alerts and status labels.
- Design desktop, tablet and mobile breakpoints in Wix Studio.
- Create reusable sections so the team can add pages without inconsistent styling.
- Prepare image standards, icon rules and accessibility states.

Phase 4 - CMS and Functional Build

- Create CMS collections, dynamic pages, filters, forms, automations and CRM pipelines.
- Implement employer verification and job-status fields.
- Connect form submissions to clear internal owners and response deadlines.
- Secure private collections and test account permissions.
- Add analytics events, structured data, metadata and redirects.

Phase 5 - Quality Assurance and Launch

- Test every page on multiple screen sizes and real devices.
- Test all buttons, filters, forms, email automations and error states.
- Complete performance, accessibility, SEO, privacy and security checks.
- Launch with a small controlled audience, review data and fix issues before major advertising.
- Document how the EarnBridge team adds jobs, verifies employers, publishes stories and handles applications.

HANDOVER STANDARD

Developer Acceptance Checklist

✓	Homepage explains EarnBridge and presents Find Work / Hire Talent without scrolling.
✓	All mobile pages are readable without horizontal scrolling or overlapping elements.
✓	Job directory filters work and empty states provide helpful alternatives.
✓	Every job page includes verification, eligibility, status, deadline and safety information.
✓	Candidate and employer forms provide confirmation and internal notifications.
✓	CMS roles and private data permissions are documented and tested.
✓	Core pages meet agreed performance and accessibility standards.
✓	Analytics events and conversion dashboards are working.
✓	All legal, privacy, terms, fee and safety information is published.
✓	The internal team receives a simple operating manual and training session.
✓	Backup administrators and recovery details are documented.
✓	No unsupported guarantee, fake statistic, placeholder testimonial or copied competitor text remains.

Final Strategic Recommendation

Build a guided platform, not merely a beautiful website

The strongest EarnBridge website will combine the credibility of a recruitment firm, the clarity of a modern product, the usefulness of a career platform and the care of a human support service. The developer should prioritise trust, evidence, simple actions, mobile performance and operational systems that EarnBridge can maintain after launch.

Document Note

Company offerings and website technologies can change. The developer should verify platform documentation and competitor features again before final implementation. Competitive success will depend on operational delivery, genuine employer relationships, candidate outcomes and continuous testing as much as visual design.
